The system will allow gym owners to generate different users and training plans for their clients, thus organizing the times of exercise routines.

The XLL system will be developed on a Web platform, this application will allow gym owners to manage the exercise plans of their clients and the machines that they will use in said plans, allowing an improvement in the time of use. of each machine in the plans, with the client always having an insured machine for their use.
In addition, the user (Client) will be able to carry out their training with an exercise plan previously loaded by a professional, depending only on the system and managing their progress and history from the web.
